Comments: I a proponent of the use of non-animal tests for the validation and approval of US products. \*\*Please consider the acceptance of internationally validated non-animal tests.\*\* In light of what humans know about the suffering and awareness of our animal dependents, it is only right that their suffering be a consideration in the advancement and production of US goods. When a replacement exists for an animal-based test it should absolutely be put into use. Thanks for your time.

Jennifer Mathews
